Qproteome™ Mammalian Protein Preparation Handbook

For preparation of total protein from mammalian cells
Benzonase endonuclease is covered by several patents, i.e. the US patent No. 5,173,418 and EP No. 0229866. Nycomed Pharma A/S, Denmark claims worldwide patent rights to Benzonase endonuclease which are licensed exclusively to MERCK KGaA, Darmstadt (Germany).

Storage

All kit components should be stored at 2–8°C. For longer storage, Benzonase® should be stored at −20°C.

Product Use Limitations

Qproteome Kits are developed, designed, and sold for research purposes only. They are not to be used for human diagnostic or drug purposes or to be administered to humans unless expressly cleared for that purpose by the Food and Drug Administration in the USA or the appropriate regulatory authorities in the country of use. All due care and attention should be exercised in the handling of many of the materials described in this text.

Product Warranty and Satisfaction Guarantee

QIAGEN guarantees the performance of all products in the manner described in our product literature. The purchaser must determine the suitability of the product for its particular use. Should any product fail to perform satisfactorily due to any reason other than misuse, QIAGEN will replace it free of charge or refund the purchase price. We reserve the right to change, alter, or modify any product to enhance its performance and design. If a QIAGEN product does not meet your expectations, simply call your local Technical Service Department or distributor. We will credit your account or exchange the product — as you wish.

A copy of QIAGEN terms and conditions can be obtained on request, and is also provided on the back of our invoices. If you have questions about product specifications or performance, please call QIAGEN Technical Services or your local distributor (see inside back cover).
Technical Assistance

At QIAGEN we pride ourselves on the quality and availability of our technical support. Our Technical Service Departments are staffed by experienced scientists with extensive practical and theoretical expertise in molecular biology and the use of QIAGEN® products. If you have any questions or experience any difficulties regarding Qproteome Kits or QIAGEN products in general, please do not hesitate to contact us.

QIAGEN customers are a major source of information regarding advanced or specialized uses of our products. This information is helpful to other scientists as well as to the researchers at QIAGEN. We therefore encourage you to contact us if you have any suggestions about product performance or new applications and techniques.

For technical assistance and more information please call one of the QIAGEN Technical Service Departments or local distributors (see inside back cover).

Quality Control

In accordance with QIAGEN’s ISO-certified Total Quality Management System, each lot of Qproteome Kits is tested against predetermined specifications to ensure consistent product quality.

Safety Information

When working with chemicals, always wear a suitable lab coat, disposable gloves, and protective goggles. For more information, please consult the appropriate material safety data sheets (MSDSs). These are available online in convenient and compact PDF format at www.qiagen.com/ts/msds.asp where you can find, view, and print the MSDS for each QIAGEN kit and kit component.

24-hour emergency information

Emergency medical information in English, French, and German can be obtained 24 hours a day from:

Poison Information Center Mainz, Germany  Tel: +49-6131-19240
**Introduction**

In order to be able to efficiently purify and analyze proteins, they must first be released from their host cell in a soluble form. Therefore, the first step in protein purification and analysis is cell lysis. Mammalian cells are bounded by a plasma membrane, which is composed of phospholipids and proteins. In contrast to bacterial or yeast cells, this membrane can be easily disrupted, but any lysis method should be gentle enough to deliver active, native-conformation proteins.

The Qproteome Mammalian Protein Prep Kit provides gentle but efficient detergent-based lysis of mammalian cells to deliver a total protein fraction suitable for any downstream application. Cell pellets are incubated with Mammalian Cell Lysis Buffer that is supplemented with Benzonase® — an enzyme that digest nucleic acids — and a protease inhibitor, which protect the released proteins from enzymatic degradation. No specialized equipment is required. Cells are simply incubated with lysis buffer and centrifuged to separate cell debris. The supernatant contains the total protein fraction, which can be further purified or directly analyzed, for example by SDS-PAGE.

* Average of 3 preparations, each of $5 \times 10^6$ cells.
Protocol: Isolation of Total Proteins from Mammalian Cells

The volumes given in this protocol are suitable for processing of 5–10 x 10^6 mammalian cells. When processing larger or smaller cultures, adjust the volume of buffer used accordingly.

Equipment and reagents be supplied by the user
- Ice-cold PBS
- Cell scraper
- 15 ml conical tube
- Microcentrifuge tubes
- Microcentrifuge
- Rotary shaker

Important notes before starting
- It is possible that the Protease Inhibitor does not thaw at room temperature. If this is the case, heat the protease inhibitor solution to 37°C with agitation and cool to room temperature.
- When processing small volumes, it may be necessary to dilute Benzonase® using Mammalian Lysis Buffer.

Procedure

Cell collection
1. Aspirate cell-culture medium from culture plate.
2. Wash cells twice with 5 ml ice-cold PBS.
3. Add 10 ml ice-cold PBS.
4. Remove cells from culture plate by gentle scraping with cell-scaper and transfer cells to a pre-chilled 15 ml conical tube.
5. Centrifuge cell suspension for 5 min at 450 x g in a centrifuge pre-cooled to 4°C. Discard supernatant. Keep cell pellet on ice.
Cell lysis

6. Add 1 U Benzonase® and 10 µl of Protease Inhibitor (100x) to 1 ml Mammalian Lysis Buffer.

7. Resuspend 5–10 x 10⁶ cells in the Mammalian Lysis Buffer prepared in step 6 and incubate on a rotary shaker for 5 minutes at 4°C.

8. Centrifuge the suspension for 10 minutes at 14,000 x g in a microcentrifuge tube pre-cooled to 4°C.

9. Transfer the supernatant into a new microcentrifuge tube.
   The supernatant contains the total protein fraction. For some applications, such as 2-D gel analysis, the protein fraction may need to be concentrated. This can be achieved by acetone precipitation (see below).

Protocol: Acetone Precipitation of Protein Fractions

This protocol is suitable for concentrating and desalting protein samples for downstream applications such as 2D-PAGE.

1. Add four volumes of ice-cold acetone to the protein fraction and incubate for 15 min on ice.

2. Centrifuge for 10 min at 12,000 x g in a pre-cooled microcentrifuge at 4°C. Discard the supernatant and air dry the pellet.
   Do not overdry the pellet as this may make it difficult to resuspend.

3. Depending on the application, resuspend the pellet in the required sample buffer.

Troubleshooting Guide

This troubleshooting guide may be helpful in solving any problems that may arise. The scientists in QIAGEN Technical Services are always happy to answer any questions you may have about either the information and protocol in this handbook or molecular biology applications (see back page for contact information).

Comments and Suggestions

Inconsistent results in protein quantification assays
The extraction buffer contains components that may interfere with protein quantification assays
   Perform a precipitation step (e.g., using acetone, see above) to remove interfering substances.
